Continuation Sheet

Item 3

1. Applicants' proposed amendments to the claims have changed the scope of the claimed invention. The instant claimed scope has changed from the open or partially open "consisting essentially of" to the closed "consisting of", which will require new search and consideration.

Applicants also amended the claims to recite "a ... dosage form comprising two analgesic compounds" (emphasis added), which has narrowed the scope of the invention to two compound from a broad claim of a genus of dosage forms that can comprise different numbers of analgesic compounds. This changing in scope of the claim will require new search and consideration.

2. The proposed amendments to the claims will also require new consideration such as issues under 35 USC 112, 2nd paragraph. For example, the proposed amendments to the claim (Claim 38) could render the claim indefinite, because it is not clear exactly what entities (or compounds) constitute the claimed oral dosage form.

Item 11.

- 3. Applicants amendments to the claims and accompanying arguments do not overcome the following rejections:
- A.) Claims 38, 47-48, 50-52 as amended or originally filed are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 4,569,937 (Baker et al) and Friedel et al (Drugs. 1993. Vol. 45 (1) pages 131-156) and Eversmeyer et al (American Journal of Medicine, Aug. 1993, vol. 95, pages 10S-10S).

B.) Claim 49 is rejected under 35 U.S.C. 103(a) as being unpatentable over Baker et al. '937 and Friedel et al. Drugs Vol. 45(1): pages 131-156 1993) and/or Eversmeyer et al. as

applied to claims 38, 47-48 and 50-52 above, and further in view of Oshlack et al. US Pat. No.

5,472,712 (12/95) or Oshlack et al. US Pat. No. 6,294,195 (9/01: effectively filed 10/93 or

earlier).

Applicants' amended the claim (Claim 38) to recite "consisting of" to limit the claimed analgesic compounds in the oral dosage form to nabumetone and oxycodone, and their

pharmaceutically acceptable salts. However, the transitional phrase "consisting of" does not

modify the "oral dosage form", which can comprise other ingredients besides the analgesic

compounds. Furthermore, the claimed method of treatment is also not close-ended because the

transitional phrase "comprising". Thus, the instant claim is drawn to a method of administering

an oral dosage form, which may "comprise" two analgesic compounds (that are consisting of

nabumetone and oxycodone) and other ingredients.

Applicants' argument filed 10/30/06 only seems to discuss the references individually.

Applicants discussed the Baker reference alone from p. 6 to top of p. 10 of the Reply, 10/30/06.

Although applicants discussed the Friedel and Eversmeyer references (Reply, p. 10, last two

para), applicants did not consider the three references as a combination for the obviousness

rejection.

Applicants also seem to argue that because each one of the references (Baker, Friedel or

Eversmeyer) does not teach all elements of the claimed invention individually, there is no

Application/Control Number: 10/056,348

Art Unit: 1639

motivation to combine the references. However, the obviousness rejection is based on the combination of references (Baker, Friedel and Eversmeyer).

Applicants also argue that the Baker reference teaches away from the claimed invention. In support of this argument, applicants state that a reference (Sunshine) cited by the Baker reference does not teach nabumetone as a NSAID, and thus the Baker reference teaches away or provides no motivation to use nabumetone. However, the obviousness rejection as set forth in the previous Office action is based on the combination of the Baker, Friedel and Eversmeyer references, not a combination of Baker and Sunshine. The Sunshine reference only offers examples of prior art's teaching. It does not, on the other hand, teach away from other analgesic drugs that are known in the prior art that can be combined with a narcotic analgesic (such as oxycodone).

Contrary to applicants' assertion, the Baker reference clearly teaches combining a narcotic analgesic and a NSAID drug (e.g. Col. 1, lines 20+). The Baker reference also clearly teaches the motivation to combine a narcotic analgesic and a NSAID drug. For example, the Baker reference states "the analgesic effect of the combination of a selected NSAID and a selected narcotic analgesic is greater than for either alone" (col. 1, lines 23-25). This provides ample motivation for a person of ordinary skill in the art to combine a selected NSAID and a selected narcotic analgesic drug to achieve a greater effect.

Furthermore, the Baker reference also teaches the preferred narcotic analysis is oxycodone, as discussed in the previous Office action, mailed 8/1/06, p. 11, para 3+). The Baker reference does not specifically teach that nabumetone (a NSAID) is combined with oxycodone.

Application/Control Number: 10/056,348

Art Unit: 1639

Page 5

However, Friedel teach nabumetone is a NSAID, and both Friedel and Eversmeyer teach

nabumetone offers advantages such as less toxic effect, more safe, and reduced side-effects

(Office action, mailed 8/1/06; pp. 12-13). Thus, a person of ordinary skill in the art would have

been motivated at the time the invention was made to combine oxycodone and nabumetone as a

combination of analgesic compounds to achieve the greater additive effects.
